Call for Proposals in a Joint NSF-BSF Program with the Electrical, Communications and Cyber Systems Division (ECCS)

The U.S.-Israel Science Foundation (BSF) is pleased to announce the opening of a new round of applications in the joint funding program in Electrical, Communications and Cyber Systems Division (ECCS), in the Engineering Directorate (ENG) of the U.S. National Science Foundation (NSF).

The Terms of this program are as follows:

General:

1. This NSF-BSF program is not a “special” program with the NSF setting aside money for potential grants. Rather, it is an integral part of the regular NSF programs in these discipline, with no “special” funds. Clear understanding of it by the US partner is essential before embarking on proposal writing.

Synopsis of Program:

2. The Division of Electrical, Communications and Cyber Systems (ECCS) addresses fundamental research issues underlying device and component technologies, power, controls, computation, networking, communications and cyber technologies. ECCS supports the integration and networking of intelligent systems principles at the nano, micro and macro scales for a variety of application domains in healthcare, homeland security, disaster mitigation, energy, telecommunications, environment, transportation, manufacturing, and other systems-related areas. ECCS envisions a research community that will address major technological challenges for the next generation of devices and systems due to convergence of technologies and increased emphasis on interdisciplinary research to achieve the goals of the American Competitiveness Initiative in leading the world in innovation.

A full description of the current programs can be found in the NSF website. It is strongly advised for all potentials applicants (including Israelis) to read the document carefully:

https://www.nsf.gov/eng/eccs/about.jsp
Program Areas:

1. Proposals are welcome in all areas of science supported by *Electronic, Photonic, and Magnetic Devices (EPMD)*:
   https://www.nsf.gov/funding/pgm_summ.jsp?pims_id=505250

   Proposals are welcome in all areas of science supported by *Energy, Power, Control and Networks (EPCN)*
   https://www.nsf.gov/funding/pgm_summ.jsp?pims_id=505249

   Proposals are welcome in all areas of science supported by *Communications, Circuits, and Sensing-Systems (CCSS)*:
   https://www.nsf.gov/funding/pgm_summ.jsp?pims_id=505248

2. Applications must be written jointly by an Israeli and a U.S. scientist from a U.S. research institution.

3. The NSF accepts applications only from US scientist and submission to the NSF should be made by the U.S. PI alone (the Israeli does not appear as a formal co-PI on the application). However, in the collaborative applications, the role of the Israeli partner(s) must be described. **Furthermore, it should be clearly explained why the contribution of the Israeli PI to the research project is important/essential.**

4. If awarded a grant, the Israeli scientist will receive a grant from the BSF, while the U.S. scientist will receive a grant from the NSF.

5. The size of the BSF grant to the Israeli is expected to be up to 70,000$/year for experimental programs and up to $40,000/year for theoretical or computer based program, **subject to the availability of funds**. If more than a single Israeli group is involved in the research, the budget may be increased by up to 50%

6. BSF will follow the decision by the U.S. funding agency regarding the length of the project.

7. **These programs have no deadlines and submission is welcome throughout the year. Please note that the Israeli PIs have to submit their proposals to the BSF within 7 days after the U.S. PIs submit to the NSF.**

8. We have put together a presentation with tips for Israeli scientists who wish to submit to the NSF-BSF. You can download the presentation [here](#).
Eligibility:

1. All regulations regarding eligibility of the BSF (for the Israeli PI) or the NSF (for the US PI) will apply to this program.

2. Each Israeli scientist is allowed to have only a single pending NSF-BSF proposal at any given moment. Therefore, scientists who have an active NSF-BSF grant are allowed to submit an application to this program only if their current grant is in its final year. Also, a new application, in the same or different NSF-BSF program, can be submitted after a pending application has been turned down.

3. Israeli scientists will be allowed to submit both to an NSF-BSF program and the regular BSF program, including similar applications. In the event that they are awarded a grant in both programs, they will be funded in both, unless the research application is mostly similar, in which case only their NSF-BSF program will be funded.

4. In case of similar NSF-BSF and regular BSF applications, in which the NSF evaluation was not completed by the time the regular BSF awards are made, the BSF will defer its decision regarding a possible grant to this application, until the NSF-BSF awards are announced.

Evaluation:

1. Proposals will be evaluated by the NSF, using its criteria. The BSF will create a small screening panel to quickly examine the role of the Israelis in the applications, and ascertain that it is meaningful, and that they have the knowhow and facilities to perform their part in the research. This panel will also advise the BSF regarding the budget requests, but will not evaluate the scientific merit of the applications. However, Israelis may possibly take part in the NSF evaluation process as panel members and/or external reviewers.

2. BSF is likely to fund any Israeli whose partner in this program is funded by the NSF, subject to the eligibility constraints, availability of funds, and the advice of the screening panel.

3. NSF uses a conventional peer review system with expert panels and ad-hoc (external) reviews for full proposals. However, unlike the practice in Israel, panel members serve in an advisory capacity, and final decisions lie with the program officers and their management. These post-panel officials may introduce additional considerations such as whether the research topic already has support from the U.S. Government, whether support from other NSF programs may be sought, etc.
4. Israeli applicants are advised that they should pay particular attention to the NSF evaluation criteria, [http://nsf.gov/bfa/dias/policy/merit_review/](http://nsf.gov/bfa/dias/policy/merit_review/), which may include issues such as broad impact, data management, etc. That are either missing in BSF/ISF applications, or have a greatly different meaning (particularly the term ‘broad impact’). **Failure to appropriately refer to such topics by the U.S. partner may be detrimental to the proposal, including its rejection without review.**

**Submission:**

The full proposals will be submitted to the program twice.

The U.S. scientist (only) will submit to the NSF using its regulations ([http://www.nsf.gov/publications/pub_summ.jsp?ods_key=gpg](http://www.nsf.gov/publications/pub_summ.jsp?ods_key=gpg)) and submission system ([https://www.fastlane.nsf.gov/](https://www.fastlane.nsf.gov/)). **The U.S. PI submission to the NSF MUST include the BIOGRAPHY (in the NSF format) and BUDGET (in the BSF format) of the Israeli partner as part of the auxiliary material.**

The Israeli scientist (only) will submit to the BSF, also providing the U.S. scientist information, according to its regulations and submission system: [http://www.bsf.org.il/ElectronicSubmission/GatewayFormsAndGuidelines.asp?PageId=7&innerTextID=0%20](http://www.bsf.org.il/ElectronicSubmission/GatewayFormsAndGuidelines.asp?PageId=7&innerTextID=0%20)

**Timetable:**

Proposals are accepted throughout the year in all programs. Israeli PIs must submit the proposal to the BSF within 7 days after the U.S. PIs submit to the NSF.

*Applicants are requested to acquaint themselves with the BSF regulation for this NSF-BSF program before they submit applications. The forms and regulations can be downloaded from the BSF website ([www.bsf.org.il](http://www.bsf.org.il)) under ‘Guidelines and Forms’.*

**Questions regarding the applicability of the proposed research for this program should be directed by the U.S. partner to the program officer at the NSF.**
Other questions regarding this special NSF-BSF program can be discussed with the BSF management by mail or phone (972-2-5828239): Dr. Rachel (Heni) Haring (heni@bsf.org.il ext. 110) or Ms. Yael Dressler (yael@bsf.org.il ext. 103). Questions regarding the online application system should be directed to Ms. Orli Rozencwajg (orli@bsf.org.il ext. 109).
